## SIX WAYS TO INCREASE PRODUCTIVITY & REVENUE WITH PAPERLESS FIELD WORK MANAGEMENT

PART ONE

Today, there's no reason for service businesses like yours to rely on outdated, paper-based processes to manage technicians and engineers out in the field. When you implement a digital field and asset management solution, there are a wide range of far-reaching, cross-company benefits. **Here are six opportunities to increase productivity and revenue when you implement a digital transformation:**

### 1 Job Receipt

Only input customer data once to receive a digital site assessment including when, where, and how.

- ✓ No storage required.
- ✓ Eliminate paper waste.
- ✓ Prioritize by job or incident.

### 2 Work Order Creation

Automate estimates, parts, and equipment orders. Calculate pricing and discounts automatically. Easily complete forms and route for processing and scheduling.

- ✓ Increase work order completion by up to one hundred percent.

### 3 Job Scheduling

See real-time availability for better technician scheduling, easily plan site surveys, and provide accurate timelines for customers.

- ✓ Schedule fabrication and customization digitally.
- ✓ Access real-time asset preparation and accurate delivery updates.

### 4 Job Dispatch

With the site survey completed digitally, there's no need to worry about collecting or returning unfinished, illegible paperwork to the customer.

- ✓ Reduce travel and time spent on job sites.
- ✓ Reduce costs associated with each job.

### 5 Job Routing

Transform operations with a single truck roll and reduce delays. Easily keep customers up to date with automated text messages, emails, and phone calls.

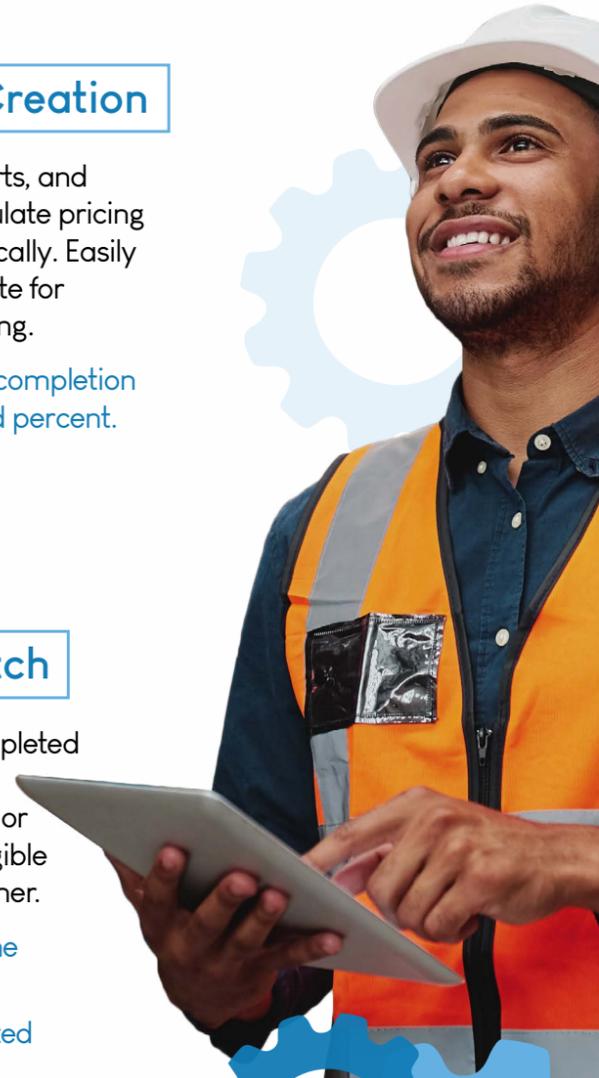

- ✓ Use GIS mapping and traffic data to pinpoint the best routes.

### 6 Arrival at the Job Site

When they arrive at the job site, field technicians have all the job details they need on their device. Technicians arrive to every job with the right tools and parts, at the right time, every time.

- ✓ Increase crew productivity.
